First Evaluation

Read the following texts carefully, and then in your ANSWER BOOKLET answer all the questions that follow text. Your answer should be based on the texts.

Sea turtles are among the most ancient creatures in the world. There are seven species of sea turtles that can be found today and they are found in all waters that are warm. Since the Red Sea's water in Aqaba is constantly warm, it is considered to be the place where sea turtles travel in search for food. All sea turtles have hard shells that protect them from predators. Their shells are also streamlined to help them swim through the water more easily and faster. Their colour differs depending on the species; they could be yellow, green and black. Unlike other turtles, sea turtles cannot hide their legs and head inside their shells because they have flippers that direct them smoothly while swimming. Those flippers are also built for digging the sand. Most sea turtles eat small animals, such as sponges, shrimps, snails and jelly fish. Other sea turtles feed on sea plants and grasses, such as seaweed. Surprisingly, sea turtles can live up to 80 years and can weigh up to 200 kilograms!
