Technology & Workplace Reading Comprehension Test

Text 1: Smart Workplaces and Digital Safety

In today's digital world, many organisations are shifting to virtual platforms. Employees are now expected to work online using company servers, cloud drives, and digital applications. These changes have improved flexibility but also raised concerns about cybersecurity.

To protect valuable company files and sensitive data, most companies install antivirus software and update their firewall systems regularly. Some even provide training on identifying phishing attempts and avoiding scams. In some workplaces, employees are required to back up their work to prevent data loss due to malware or hacking.

Moreover, the company culture in many modern workplaces encourages open communication using chat apps and online platforms. While this improves speed and collaboration, it can sometimes lead to distractions or even data leaks if not monitored properly.

Part 4: Inference and Justification:

A New World with Virtual Reality

Virtual reality (VR) is changing the way people experience the world. With a headset and a few sensors, users can feel like they are walking on the moon, diving in the ocean, or standing in a classroom on the other side of the planet. Originally used mostly for gaming, VR is now helping in areas such as education, medicine, business, and communication.

In education, virtual classrooms allow students to join lessons from anywhere in the world. In medicine, doctors train using 3D simulations. Even in the workplace, companies use VR to teach employees or hold virtual meetings. These uses save time and money and help people connect in creative ways.

However, there are some concerns. VR equipment is expensive, and people can spend too much time in virtual worlds, ignoring real-life interactions. Despite this, many believe VR will be a major part of the future, changing how we live, work, and learn.
