There were many different kinds of dinosaurs and they were all different sizes. Some ate meat and others ate plants.

Most dinosaurs had four legs, but some had two small front ones, like arms. This made it easier for dinosaurs to catch and kill animals.

This dinosaur is called Diplodocus and it weighed the same as five elephants. It couldn't run fast. You can see in the picture it had a very long neck so that it could eat leaves at the top of trees. It didn't eat meat at all.

Scientists believe that the Diplodocus used its tail to fight.
