

READING**(16marks)****Reading comprehension****Q1 Read the following text and answer the following questions:**

The polar bear lives in the cold, snowy Arctic lands in the North Pole. It has a thick layer of fat underneath its skin and this helps to keep it warm. It also has a thick layer of fur all over its body, including the sole of its feet, which allows it to swim in the coldest seas without feeling the cold. Beneath the fur the skin is black, so it absorbs heat .Polar bears are excellent swimmers .Their nostrils can close so they can swim underwater and between ice floes to look for seals, their favorite food.

Unlike polar bears, penguins live in the South Pole and many live in Antarctica. Penguins keep warm with thick skin and lots of fat under the skin. Penguins have dark colored feathers on their back, which absorb heat from the sun to keep them warm .like polar bears, penguins are excellent swimmers. They have webbed feet and streamlined bodies for powerful and fast swimming. They have different diets, but in general, they eat a variety of small fish.
